

### Available For:

- Windows
- Windows Servers
- OSX
- Windows Surface

## Use Your Time Productively

There are more important ways to use your time than tracking down critical work files.

Retrieving and making even simple edits to files scattered over multiple repositories presents a serious time-sink. Small inconveniences accumulate to take large bites out of your time.

They're your files. You should have them when and where you need them.

## WebDrive - Relief for the Busy Professional

WebDrive enables you to access all of your content, no matter where it's saved. Your files are scattered—they're on the corporate Sharepoint server, DropBox, legacy FTP servers. Opening WebDrive gives you instant, unified access to any of those files.

WebDrive maps a drive letter straight to your corporate or cloud servers. Now you can reach your files as if they were right on your desktop, from the applications you use every day. Open, edit, save. That's it.

WebDrive delivers these features from a consistent, simple interface. Whether you have a Mac at home and a PC at work, a tablet or phone when you're on the go; whatever devices you use, there's a WebDrive product with a consistent look and solid dependability. Spend less time relearning tasks or finding new software to get the same results.

Get your information and get going.

SRT

## IT Managers, We've Got You Covered

WebDrive is the smartest software you'll ever deploy. It's simple to learn for IT professionals and amateur users alike, since it looks and behaves just like your desktop.

WebDrive links to files in any location and is available for any device your company or its employees use.

*Your users just got a little more productive.*

WebDrive comes equipped with industry-standard security features, including Secure Sockets Layer (SSL) and Secure Shell (SSH), and provides S/Key encryption of passwords to assure transmission of files is secure.

*Your boss just got a little happier.*

WebDrive also comes with customizable preconfiguration options for Windows environments. Set up one installation file tailored to meet the needs of your users and let them install it. No individual handholding. Software deployed.

*Your job just got a little easier.*

### Key Features:

- Maps a drive letter to SFTP, WebDAV, FTP, Google Drive, DropBox, or Amazon S3 Servers
- Edit files from their location without uploading and downloading
- SSL/TLS encryption for secure transfers
- Secure password encryption on supported servers
- DOS/Legacy support
